
FormatMERGE "device.filename"

Description

See EXTENDED BASIC MANUAL PAGE 122 for more data. The only reason for this page in RXB is a problem with SIZE and the MERGE command breaks SIZE from working as they both use the same address to record XB RAM END ADDRESS. This problem will only happen if you use PRAM to change program normal start and end locations of XB RAM. Please never use the merge command if you have changed XB RAM with PRAM command.

Command

Change locations to start XB		>CALL PRAM(-12288,-16384)
to >C000 and end to >D000		
This will load a program.		>OLD DSK1.TEST
This will merge both programs.		>MERGE DSK1.TEST2
SIZE will report wrong program		>SIZE
space incorrectly
