

Format	CALL HCHAR(row,column,character-code)
	CALL HCHAR(row,column,character-code, repetition[,...])

#### Description

See EXTENDED BASIC MANUAL page 188 for more data. The only syntax change to HCHAR is the auto-repeat function. Notice the new auto-repeat must have the repetitions used or it gets row confused with repetitions. Also RXB HCHAR is now in ROM.

#### Programs

This line puts character 38 at row 1 column 1 99 times, then puts character code 87 at row 9 column 1	>100 CALL HCHAR(1,1,38,99,9,1 ,87)
Fills screen with characters.	>100 CALL HCHAR(1,1,32,768,1, 1,65,768,1,1,97,768,1,1,30, 768) :: GOTO 100

#### Options

CALL HCHAR is now written in Assembly so much faster is faster than normal XB, also as separate line numbers are needed to continue placing characters on screen.  
See VCHAR, HPUT, VPUT, HGET and VGET.
