
Format CALL ONKEY(string,key-unit,return-variable,
 status-variable) GOTO line-number[,...]

 CALL ONKEY(string-variable,key-unit,
 return-variable,status-variable)
 GOTO line-number[,...]

Description

ONKEY compares a string or string-variable characters one at a time to the key return-variable until a match is found. The string length may be longer than the number of GOTO line-number list. But a error results if that key is pressed as no line-number corresponds with the position of the key. If the string length is less than the number of GOTO line-numbers then the extra GOTO line-numbers are not used. The position of the characters in the string correspond to the GOTO line-number in the list. i.e. string "12345" GOTO 1,2,3,4,5 in the example:

```
CALL ONKEY("12345",0,K,S) GOTO 10,20,30,40,50
```

The key pressed like say 3 means line 30 will be used.

Another example:

```
10 CALL ONKEY("Test",0,K,S) GOTO 22,29,34,41 :: GOTO 10
```

If T is pressed then 22 is used.

If e is pressed then 29 is used.

If s is pressed then 34 is used.

If t is pressed then 41 is used.

If no key pressed GOTO 10 to repeat line.
